## OHIO BEAUTY (*Actual Size*)

(*See Back Cover*)

**Historical**—In the fall of 1914 Mr. John M. Rutledge of Ohio was given two Apples as samples, at a glance he knew he had never seen any like them before. After eating the fruit and finding the flavor so delicious, he inquired from the party who gave them to him where they were grown. He learned that the apples were from a tree on his friend's farm, found in a corner of his garden some years ago. The tree which is hardy and a vigorous grower is believed to have grown from a seedling. It has yielded a good crop for the past eight years.

The apple is exceptionally large, uniform in size and shape. Skin is very smooth. Color yellow or greenish blush striped with red. The flesh which is slightly tinged with yellow is crisp, tender, aromatic, juicy and subacid which make it an extra fine eating or cooking apple. Season, December until April.

We consider the "Ohio Beauty" one of the most handsome winter fruits grown. Its vigor, productiveness and the exceptionally high quality of the fruit, its great beauty and shipping qualities put it in a class by itself.

This wonderful apple was brought to our attention by Mr. Rutledge. We immediately began to propagate this variety by budding a number of trees from scions received from him.

We sell all "Ohio Beauty" Apples under a special guarantee seal that is affixed to each tree or bundle of trees. We have the exclusive sale of the "Ohio Beauty" Apple.

**Price**—5-7 ft. XXX grade \$1.50; 4-5 ft. XX grade \$1.25; 3-4 ft. X grade \$1.00 each.

We received several hundred orders for the "Ohio Beauty" last spring which we were unable to fill. Orders are booked as received while our stock lasts. Only a limited quantity to offer.

# WOOD'S RELIABLE APPLE TREES

CUSTOMERS who intend to plant out Apple Orchards, are advised to place their order early, as Apple trees are more scarce this season than last. Last spring we refused several hundred orders for varieties of which we were sold out. **FIRST COME, FIRST SERVED.**

#### SCARCITY OF NURSERY STOCK

The propagation of Nursery Plants and Trees is an art. It takes three or four years to develop Nursery Stock to planting size. The recent war greatly decreased propagation as 90% of the Fruit Seedlings which Nurserymen plant are imported from France. For the past three years France has been able to furnish only very few Seedlings, as they cannot get help to grow them. It will be several years before they will again be able to produce the amount of stock they did before the war.

**Pears, Cherries, Plums and Quinces** will be higher in price for the next four or five years. 85% of the Growers of Nursery Stock cannot obtain Seedlings for new planting.

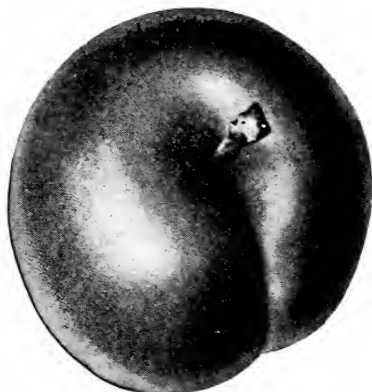

Planters should appreciate the present situation and place their order early as the supply of many standard varieties will certainly be exhausted before long.

### HISTORY OF THE "DR. WORCESTER" PEACH

In the Fall of 1890 *Dr. Worcester of Middletown, N.Y.*, planted a bed of choice peach pits which he gathered from various sources. In 1892 he transplanted several of the strongest seedlings and in 1895, when these seedlings commenced to bear, all but one were clingstones. *On one of the trees he found several yellow and crimson peaches of enormous size and great beauty which were perfect freestones. In 1896 this tree was heavily loaded with very large, beautiful peaches.*

In 1897 *Dr. Worcester* sent two peaches to Mr. Chas. A. Green, of Rochester, N. Y. Mr. Green's response was as follows:

"Thanks for the two peaches, which are, indeed, *very large, very beautiful and of fine quality.*"

Mr. Green requested *Dr. Worcester* to send him the history of this peach.

In 1898 *Dr. Worcester* sent a basket of his seedling peaches to the *American Institute of New York* and they were so well pleased with them that they sent the doctor a Certificate of Merit.

Up to this time *Dr. Worcester* had only the original tree. In August 1899 he budded several trees to make a thorough test of this peach and continued to bud some each year.

My attention was called to this wonderful *Peach* in 1915 and for two seasons I went to see the trees while they were in bearing. The *size and high quality of the fruit* so greatly impressed me that I persuaded *Dr. Worcester* to permit me to bud it and offer it to the public.

EXTRA LARGE SIZE TREES

\$1.00 each; \$9.00 per ten

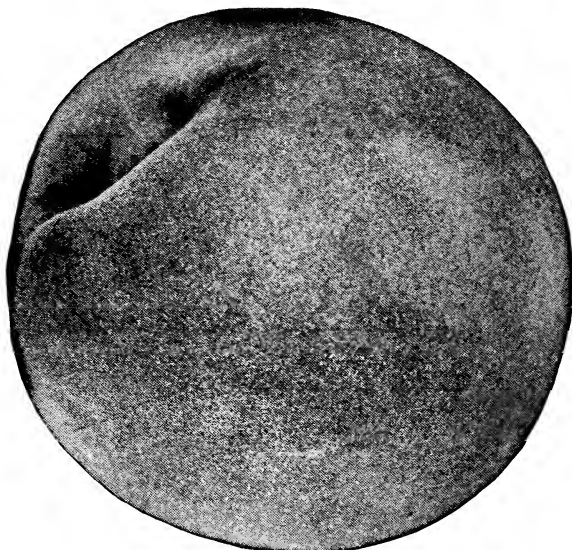

**Hale**—In size it is one-third larger than the Elberta and is more highly colored. The skin is deep crimson, smooth, tight, and without fuzz. Flesh is golden yellow, firm, and has a most delicious flavor. The pit separates easily from the flesh. It is exceptionally valuable as a commercial Peach owing to its unusual keeping and shipping qualities. Will ship nearly as well as an Apple. Fruit ripens about five days before the Elberta, but it will hang on the tree longer. Your collection is incomplete without this variety.

**Rochester**—Is in a class by itself because it is the only good sized, yellow freestone Peach of fine quality ready for market in the middle of August in the northern states. The fruit is large, yellow with a most attractive red blush; juicy and delicious and keeps well; an excellent shipper. Its greater sweetness over other Peaches requires only half the usual quantity of sugar in canning. The tree is a strong grower; early and regular bearer of big crops, and absolutely hardy; two weeks ahead of Early Crawford.

Woodlawn Golden

**Woodlawn Golden**—A new variety which we recommend for general culture. The fruit is large and highly colored; flesh is yellow, firm and flowing over with rich, finely flavored juice. Fine for canning as well as being the most desirable for eating from the hand. The tree is a strong grower and very productive. Perfect freestone. Ripens first of September.

Elberta—The Greatest Money-Maker of Them All

**Elberta**—The greatest commercial Peach on the market today. This variety is the most popular all over the country and there are more of these planted than of any other kind. It is undoubtedly the best orchard kind and also is valuable for garden planting.

Spanish Chestnut

**Spanish Chestnut**—Handsomed, round-headed tree, producing large crops of very large Nuts that sell readily at good prices. Not as sweet as American. Valuable shade tree and very ornamental.

American Chestnut

attaining great height when mature. It is beautifully symmetrical, and when in blossom is as handsome as a tree can be. It bears a Nut of good quality and seldom fails to produce a good crop. Aside from their crop value,

all Chestnut trees are especially desirable for shade purposes and for ornamental planting. 4 to 5 ft., \$1.00 each; \$9.00 per 10.

Butternut

**Butternut**—Produces large, handsome, elongated Nuts with rich, sweet, oily kernel; very nutritious. Cultivation increases the size of the Nuts. The tree grows rapidly and yields large crops in a few years. At present the supply is insufficient for the demand of a single city market. There are large profits in Butternut growing. A small outlay will bring large returns as soon as the trees begin to bear. 4 to 5 ft., \$1.00 each; \$9.00 per 10.

Williamsville, N. Y., Oct. 9, 1919.

## Northern Grown Nut Trees

English Walnut

**English Walnut**—An exceedingly handsome tree for the lawn. It produces large crops of thin shelled, delicious Nuts which are always in demand at good prices. The English Walnut can be grown in the Eastern and Northern States as well as in California and the South. It is grown successfully in Monroe County, N. 3 to 4 ft., \$1.25 each; \$11.00 per 10

The Nut in the above photograph were picked from a five-year-old English Walnut tree near our office.

Japan Walnuts picked from a six-year-old tree

**Japan Walnut**—A choice improved variety, grows with great vigor, forming a handsome head without pruning; has withstood a temperature of 20° below zero without injury. Tree begins to bear when 2 or 3 years old. 3 to 4 ft., \$1.00 each; \$9.00 per 10.

A. Y. Cathcart, Bristol, Ind., says: "I have been raising Japan Walnuts for 18 years and am more than pleased with them. They are very hardy and do well in Maine, Minnesota and Canada, as they have stood 30 degrees below zero without injury. The trees come into bearing young. I have trees three years old that bore Nuts this season; 18 years old, each have three to four bushels. In quality the Nuts resemble the Butternut, being much richer than English Walnut. Trees grow very fast and are fine for shade.

Black Walnut
